

► BUSINESS DEVELOPMENT — TWO CLUBS IN PLAY

Wednesday sit-down with the head of the Dixie squash club is locked · pickleball meetup with the Milton Sports Community done — their read on RacquetIQ pricing: \$50

RacquetIQ — 24-Hour Report

Aug 17 → 18, 2026 · made by Claude · pricing shipped, real players priced it back, and the identity bug is gone

15 commits · +55k lines

RacquetIQ Pro paywall shipped

Player-ID errors 46.4% → 2.1%

App Store package ready

On the ground

Dixie squash club — Wednesday (Aug 19) confirmed. Gurjot is setting the session with the club head — “Wednesday? Ill text him today” / “Cool works.” Same thread where the club angle first surfaced.

Milton Sports Community — priced by real players. The Discord crew I've been organizing games with since July. Met them today at the pickleball courts, walked through RacquetIQ, and the session's conclusion on price: **\$50 is a good number.**

What the app charges vs. what the court said

\$50

the Milton verdict — “a good price” from players at the court

\$9.99/mo

RacquetIQ Pro monthly — shipped tonight

\$79.99/yr

annual (\$6.67/mo) — save 33%

3

analyses free before the paywall — demo & library always free

The pricing call to make before launch: tonight's shipped tiers next to today's court-side number. Reconciling the \$50 signal with the \$9.99 / \$79.99 structure is the open decision — more price points land Wednesday at Dixie.

What they priced — the product as of tonight

Tonight's App Store submission set — pose overlay on the match video, named shots and placement, coverage heat maps, the library, the tutorial.

The bug under every stat — player identity, fixed

The tracker told players apart by court position alone, so every crossing or occlusion was a coin flip that then stuck. Shot counts, placement, both heat maps, T-time, predictability — all of it sat on those labels.

Before — same frame, wrong names. t=207.5s of an archive match: position-only tracking tags the left player B (orange), the right player A (green) — and a swap, once made, persisted for whole stretches.

After — appearance re-ID. The fix reads a torso-appearance signal the pipeline already computed but never used — now in both the Python and the on-device Swift engine. Same frame, right names.

46.4%

of audited frames carried the wrong player label
— before

2.1%

after re-ID, measured by the same frame-by-frame audit

~15s

between identity swaps on the worst match,
before the fix

What got built in these 24 hours

RacquetIQ Pro subscription — 3 free analyses, then \$9.99/mo or \$79.99/yr. Fails open: an entitlement the app can't verify never locks out a paying user. [59399b2](#)

Paywall closed out for App Review — purchase confirmation now driven by the purchase outcome, storefront prices re-fetched correctly, legal docs corrected. [6c7d256](#)

App Store submission package — listing copy inside Apple's limits, privacy answers, review notes, five screenshots. [6c7d256](#)

Player identity re-ID in both engines — the fix above, plus a frame-by-frame audit tool that produced the numbers. [7bf013f](#)

Pose skeletons + named shots — 17 joints drawn over the video; serve, drive, cross-court, drop, boast, volley. Schema v2, and analyses already on phones still open. [73c6fee](#)

The six-build TestFlight crash, cracked — new crash forensics captured what Apple's logs strip: a bare [ios/](#) in `.gitignore` kept the analyzer's Swift half out of every EAS build. Analysis now runs on-device on TestFlight. [6a7ed16](#) [41cf086](#)

Big-video upload pipeline — in-app compression (261 MB → 140 MB), streamed uploads instead of an in-memory multipart spike, camera originals handed over untranscoded. [9bb3fed](#) [da8f652](#) [fba12b](#)

The app says only what it does — squash only, Record + Library only, and a first-launch tutorial that front-loads the two steps that can silently ruin an analysis. [06ef572](#) [9b62ba1](#) [54fcba7](#)

The alert that cracked it. Build 15's forensics dialog, on my phone — the JS error Apple's crash logs strip, naming the missing native module.
